ANSWERS

1. Answer to Question 1 is "B".

An exponential function with base b is defined by the equation $y = f(x) = b^x$ where $b > 0$ and $b \neq 1$.

5. Answer to Question 5 is "A".

The graph of $y = 3^x$ passes through the points $(0, 1)$, $(1, 3)$ and others. It is one-to-one, and has the x-axis as a vertical asymptote. Since $b = 3$ and $b > 1$, then it is increasing.

Go back 5

6. Answer to Question 6 is "B".

If $b > 1$, then $y = b^x$ defines an increasing function. If $0 < b < 1$, then $y = b^x$ defines a decreasing function.

Go back 6

7. Answer to Question 7 is "B".

Excellent! The graph of $y = 2^{-x}$ or $y = (\frac{1}{2})^x$ passes through the points $(0, 1)$, $(1, \frac{1}{2})$ and others. It is one-to-one and has the x-axis as a vertical asymptote. Since $b = \frac{1}{2}$ and $0 < b < 1$, then $y = 2^{-x}$ or $y = (\frac{1}{2})^x$ is decreasing.

Go back 7

8. Answer to Question 8 is "C".

Very Good! If $x = -1$ and $y = 50$, then $50 = b^{-1}$ or $50 = \frac{1}{b}$ or $50b = 1$ and $b = \frac{1}{50}$.

Go back 8

9. Answer to Question 9 is "D".

If $x = 0$ and $y = -1$, then $-1 = b^0$. However, $-1 \neq 1$ so there is no value of b

Go back 9

10. Answer to Question 10 is "A".

$x = 2$ and $y = e^2$, then $y = e^x$ becomes $e^2 = e^2$. If $x = 1$ and $y = e$, then $y = e^x$ becomes $e = e^1$ which is true.
